SUMMARY

High-impact Automation Engineer specializing in business operations by replacing manual workflows with intelligent, scalable, and automated systems. Expert in architecting RAG-based AI architectures, end-to-end CRM integrations, workflow orchestration, and cross-platform data synchronization. Proven track record of reducing manual overhead by deploying robust automation logic that optimizes data accuracy, response speeds, and operational ROI.

EXPERIENCE

Automation Engineer
BTL Diffusion | October 2025 – Present

- **Financial Recovery & Audit Automation**: Engineered a custom audit system using Python and PostgreSQL to analyze Amazon SP-API settlement data; identified $1,600+ in potential reimbursements within the first 90 days by flagging FBA, AWD, and storage fee discrepancies.
- **Customer Experience Architecture**: Integrated Zendesk and Shopify to build a 24/7 AI-driven support ecosystem; successfully automated 60% of storefront inquiries, significantly reducing human agent workload.
- **CX Operations Logic**: Optimized the Zendesk ticket lifecycle through advanced rerouting, automated agent assignment, and intelligent autoreplies to ensure high-speed resolution.
- **Global Inventory Orchestration:** Developed a real-time synchronization engine between Shopify API and Amazon SP-API for the US catalog; eliminated underselling and fulfillment errors by implementing SKU-validation logic with MS Teams webhook alerts.
- **AI-Driven Supply Chain Tracking:** Orchestrated an automated logistics dashboard using Python and Microsoft Graph API; utilized Gemini AI to parse AGL shipment data from Outlook, providing real-time visibility into AWD and FBA freight movements.

AI Automation Specialist
Freelance | November 2024 - Present

- **AI Systems:** Engineered a RAG-based (Retrieval-Augmented Generation) ecosystem utilizing Gemini and Pinecone for document-driven Q&A; accelerated internal knowledge retrieval and enhanced decision-making speeds for clients.
- **Revenue Operations (RevOps) Automation:** Designed and deployed end-to-end CRM workflows using n8n and Pipedrive; integrated Meta Ads API to automate lead ingestion, real-time deal tracking, and automated property data synchronization.
- **Systems Orchestration:** Developed complex, multi-platform business logic using Make (Integromat) to bridge fragmented SaaS stacks, ensuring seamless data flow and reducing operational manual tasks.
- **Consultative Implementation:** Evaluated client business processes to identify automation opportunities, delivering custom-coded (Python) and low-code solutions that maximized ROI and minimized technical debt.

SKILLS

- **Automation Tools:** Python, Antigravity, n8n, Make (Integromat), JavaScript
- **AI & LLM Ops:** RAG (Retrieval-Augmented Generation), Gemini, Claude, Pinecone (Vector Database)
- **Data & Infrastructure:** PostgreSQL, SQL, Microsoft Graph API, JSON, Webhooks
- **E-commerce & CX:** Amazon SP-API, Shopify API, Zendesk Admin, Pipedrive CRM
- **Specialized Skills:** Amazon Settlement Auditing, ETL Pipelines, Agentic Workflows

EDUCATION

Coursera – Python for Automations (in progress)

Bachelor of Science in Computer Engineering
Technological University of the Philippines - Visayas | 2021 – 2025

- **Thesis**: Heat Stress Monitoring & Cooling System for Poultry Houses (designed and implemented IoT-based monitoring and automated cooling solution)
- **PacketHacks Region VI**– Finalist
